

PRODUCT DESCRIPTION

ZURA FIBREFLEX is a two component elastomeric cementitious fibre reinforced waterproofing system based on cementitious binders, high grade acrylic polymer, graded aggregates, special additives to provide superior water proofing system.

When the two component is mixed with recommended proportion of clean water, a blend with a plastic consistency is obtained.

ZURA FIBREFLEX can be applied by stiff brush, roller or trowel to obtain the desired thickness on horizontal and vertical surfaces.

STANDARD

Tested to ASTM D4541, ASTM D882, ASTM D 1653, ASTM D 570

USES

ZURA FIBREFLEX is an high performance elastomeric cementitious coating used for waterproofing and to protect atmospherically exposed reinforced concrete structures from attack by acid, gases, chloride ions, oxygen & water ZURA FIBREFLEX remains constantly flexible under all Environmental conditions and is suitable for all types of concrete structures.

The product can be used on concrete, brick and block-work substrates and is equally suitable for new and existing structures. The product is designed to Re-surface and even out variations in concrete and masonry surfaces and bridge shrinkage cracks. It provides a seamless, flexible waterproof coating suitable for water tanks, reservoirs, basements, balconies, swimming pool and roofs. The product provides a tough durable water resistant coating which can withstand light pedestrian traffic and also has excellent weather resistance for exterior applications.

ADVANTAGES

- ▶ Flexible and Fibre Reinforced to accommodate thermal movements
- ▶ Superior water impermeability
- ▶ Excellent barrier to carbon dioxide, chloride & sulphate ions
- ▶ Allows water vapour to escape from the structure
- ▶ High resistance to the effect of long-term weathering, durable in all climate conditions including UV attack
- ▶ Non-toxic ideal for potable water tanks
- ▶ Flexible with thermal expansion similar to concrete
- ▶ Excellent bond to concrete and masonry
- ▶ Excellent crack bridging ability

TECHNICAL DATA

Pot life	30mins @30°C
Mixed density	1.8±0.1g/cc (brushable Consistency)
Tensile strength	1.2 N/mm ² (at 1.0mm thk) (as per ASTM D 882)
Colour	Grey
Adhesion Bonding with Concrete	2.0 N/mm ² (ASTM D 4541)
Water vapour permeability test	1.0 (gm./m ² /hrs) (ASTM D 1653)
Water Absorption	1.2% (ASTM D 570)
Application temp.	Not less than 10°C
Adhesion to concrete	Excellent
Toxicity	Non-toxic
Static crack	1.2mm
Flexibility expressed as Elongation %	40

APPLICATION INSTRUCTIONS

Surface preparation

All surfaces which are to receive the coating must be free from oil, laitance, grease, wax, dirt or any other form of foreign matter which might affect adhesion.

Typically concrete surfaces can be cleaned using high pressure water jet or grit blasting or by proper wire brushing. Spalled surfaces or those containing large blow holes, cracks and other such defects should be repaired using PROZURA concrete repair mortars.

Priming

To further improve waterproofing and bonding properties on porous substrates, we recommend ZURASEAL WP, a penetrating water repelling acrylic primer. ZURASEAL WP which ensures proper adhesion of all brushable acrylic elastomeric membrane coatings when waterproofing is done on porous substrates. It also acts as a bond layer between elastomeric coating and substrate.

The surfaces to be primed must be dried before treating with ZURASEAL WP.

Mixing

The liquid polymer concentrate should be poured into a suitable container. Clean fresh water is added in the proportions shown below and mixing commenced with mechanical mixer using slow speed drill (500rpm). The powder component should be added gradually to the liquid to avoid lump formation and mixed for 2-4 minutes. ZURA FIBREFLEX should be immediately used after mixing.

Do not mix more material than can be used within the pot life. Keep stirring ZURA FIBREFLEX during the application.

ZURA FIBREFLEX

High Performance Elastomeric Cementitious
Fibre Reinforced Waterproofing System

Mixing Ratio

ZURA FIBREFLEX

Components	Indl Pack	Small Pack
Part A : Powder	20kg	4kg
Part B : ZURA BOND ULTRA	5kg	1kg
Water	4L	1L

Application

For best results, surfaces should be damp. In order to obtain the protective properties of ZURA FIBREFLEX, it is important that the correct rates of application are observed. Use a short stiff brush preferably 120-150mm width and apply the mixed material like paint.

The application of ZURA FIBREFLEX should not be done if the temperature of the substrate is below 10°C. When applying ZURA FIBREFLEX on hot substrates i.e., over 30°C surface temperature, saturate the surface with water. Apply ZURA FIBREFLEX in 2 coats to achieve 1mm thickness. The second coat of ZURA FIBREFLEX shall be applied as soon as the first coat has reached touch dry state. It is recommended that for general surfacing ZURA FIBREFLEX should be applied at a minimum thickness of 1mm. Areas subjected to moderate and heavy loads/hydrostatic pressure, minimum 2mm thickness coating is recommended with screed above.

Allow the ZURA FIBREFLEX coating to dry before covering with screed. Sprinkle coarse sand on wet surface for better adhesion of screed.

To further improve elongation at failure and crack-bridging on horizontal surfaces, we recommend sandwich layer of non-woven macro-holed polypropylene fabric on the first coat of freshly laid ZURA FIBREFLEX using flat-bladed trowel to make sure that it is perfectly buttered. Apply second coat of ZURA FIBREFLEX to cover the fabric and smooth over the surface using flat-bladed trowel.

Average drying time is 4 to 6 hours at normal temperatures.

Cleaning

ZURA FIBREFLEX should be removed from tools and equipment with clean water immediately after use. Hardened material can only be removed mechanically.

COVERAGE

This depends on the required consistency. The approximate coverage per pack at even consistency (1mm thickness) is as follows:

Coverage* (20kg + 5kg pack)	16 - 18m ²
Primer Coat ZURASEAL WP	8 - 10m ² / L
1 (Polymer) : 3 (Water)	

* On primed surface using ZURASEAL WP

PACKAGING

Powder component Part A : 20kg

Liquid polymer component Part B : 5kg

SHELF LIFE

The Powder component may be stored for upto 12months when contained in its original sealed packing.

The Liquid component may be conserved for upto 18months when contained in its original sealed packing.

Store ZURA FIBREFLEX material in a dry place.

HEALTH & SAFETY

ZURA FIBREFLEX system is non-toxic but alkaline in nature. Gloves and goggles should be worn while handling. Any splashes on the skin or eyes should be washed off with clean water. In the event of prolonged irritation, medical advice should be sought.

Important: It is the Customer's responsibility to satisfy themselves by checking with the Company whether the information is still current at the time of use. The customer must be satisfied that the product is suitable for the use intended. All products comply with the properties shown on current Technical Literatures. However, **Prozura Construction Chemicals Pvt. Ltd.** does not warranty or guarantee the installation of the products as it does not have any control over installation or end use of the product. All information and particularly the recommendation relating to application and end use are given in good faith.
